Adaptive Web - Assignment 2

Mohseen Mukaddam (1209239729)

Instructions to load chrome extension

1. Unzip compressed file

2. Load url `chrome://extensions/` in chrome browser (version 60+)

3. Select Load unpacked extension

4. Select `extension` folder

5. Click on extension icon on right hand side

6. Login using default accounts or create a new one

if you click on `Register` button, it does not give a toast message. There is a bug in the toast system with this version. Use the created account credentials in the login page.

7. Profile page loads

Sometimes the server is idle and initial request might be slow or display an error on the dashboard. In that case, logout, refresh

> *and login again. (free server)*

For minimal errors use recommended chrome version

Load Visualization

1. Once you have logged in, click on statistics button to load visualizations

2. You can navigate back using the profile button on the statistics page

Insights

I used a radar graph to visualize the user's behaviour v/s average user.

Based on his/her rating, suggestions are loaded, that can help the user maximize their productivity while on stackoverflow.

I also included a frequency of these events and which pages they originated from, to make the process more transparent for the user
